SUMMARY

B.Tech Computer Science (AI/ML) student at VIT Bhopal (CGPA 8.82/10) with applied experience in Python-based financial modeling, credit risk analysis, and ML-driven investment research. Built and shipped projects spanning credit underwriting prediction, AI-powered investment scoring, and real-time sentiment analysis, with hands-on exposure to payments industry trends and capital markets. Seeking an analyst role to apply quantitative and data analysis skills from day one.

EDUCATION

VIT Bhopal University

Bhopal, India

B.Tech Computer Science & Engineering (AI/ML Specialization) — CGPA: 8.82/10

- Relevant coursework: Data Structures, Probability & Statistics, Machine Learning, Linear Algebra

PROJECTS

Vaani – AI-Powered Investment Intelligence Platform | *React, Express, Python, Claude API, FinBERT, LangChain* Personal

- Delivered a unified stock-ranking system (Investment Opportunity Score) for capital allocation decisions by designing and integrating four independent scoring frameworks – business quality (BSS), valuation (VRS), macro (MSS), and sentiment (SSS) – into a single composite metric across 300+ Nifty 500 stocks
- Automated real-time market narrative and sentiment shift detection by integrating FinBERT for financial news sentiment analysis, reducing manual research effort in tracking sentiment-driven price movements
- Enabled autonomous portfolio monitoring and post-trade reporting by building a LangChain-based agentic layer combined with Claude API-generated investment theses, streamlining the research-to-decision workflow

Credit Card Approval Prediction | *Python, scikit-learn, Pandas, Matplotlib*

FinTech ML Project

- Improved credit approval prediction accuracy by ~8% over a Logistic Regression baseline by engineering an underwriting-style feature set (income, credit history, debt ratio) and training a Gradient Boosting classifier, mirroring risk assessment logic used in real lending platforms
- Strengthened model reliability across imbalanced approval/denial classes by applying systematic feature selection and cross-validation, using Pandas and Matplotlib for exploratory data analysis and performance visualization

Aerial Plant Disease Detection | *Python, TensorFlow, Keras, CNN*

ML/DL Classification

- Increased classification accuracy across 15 crop disease categories on 52,000+ aerial UAV images by building a CNN-based image classifier and applying data augmentation to correct class imbalance; Vision Transformer variant achieved 96.57% accuracy
- Delivered as an EPICS Phase II Project as Project Coordinator and Model Implementation Lead, benchmarking 12 deep learning architectures

TECHNICAL SKILLS

Programming & Data: Python, JavaScript, SQL (Postgres), Java, HTML/CSS, Pandas, NumPy, Excel

Machine Learning: TensorFlow, Keras, scikit-learn, Gradient Boosting, CNNs, FinBERT, LangChain

Backend & Frontend: Express, FastAPI, Flask, PostgreSQL, React, React Hooks, Responsive Design

Finance & Domain: Financial modeling, credit risk analysis, payment infrastructure, capital markets, stock screening

Analytical & Professional: Quantitative reasoning, data interpretation, cross-functional coordination, written communication

CERTIFICATIONS & ACHIEVEMENTS

- **Machine Learning Specialization** – DeepLearning.ai, Andrew Ng (In Progress)
- **Machine Learning on Credit Course** – SmartBridge, in collaboration with Google for Developers (Jun 2025)
- **AIML Contest** – VIT Bhopal (Jan 2025); **Java Web Dev Contest** – VIT Bhopal (May 2025)
- **Frontend Web Development** – Code with Random (Aug 2024)

ACTIVITIES & INTERESTS

- Track fintech and payments industry developments regularly – follow Razorpay, PhonePe, and Stripe to understand how payment infrastructure is evolving in India and globally; currently reading about UPI 2.0 credit features and their impact on consumer lending
- Participate in stock market simulations and follow quarterly earnings of Indian fintech and NBFC stocks
- Part of the Gujarati Club at VIT Bhopal – helped coordinate 4+ cultural and community events over the past year
